3.1 32-group parallel RGB data	5
3.2 Reference Design for Expandable Interfaces	8
4 Interface	9
5 Dimensions	10
6 Specifications	11

1 General

The TR100 is a new generation of receiving card developed by NovaStar. A single TR100 loads up to 384x384 pixels.

The TR100 supports 1.0/2.3 (SAA) coaxial connectors, ensuring more reliable system connection and data transmission. Benefiting from the SerDes technology, the TR100 also features lower latency. What's more, the TR100 supports 18Bit+ grayscale output. It can effectively avoid grayscale loss caused by brightness reduction on LED display and make the display smoother.

2 Features

2.1 Improvement in Display Effect

Characteristics	Description
Supporting pixel level brightness and chroma calibration	Pixel level brightness and chroma calibration on NovaLCT could remove color difference effectively, make the brightness and chroma of the whole screen highly consistent, and improve display effect.
Supporting image rotation (90°, 180°, 270° and 360°)	Image rotation (90°, 180°, 270° and 360°) could be set on the NovaLCT.
Supporting 18Bit+ grayscale output	Enabling of 18 bit mode could improve LED display grayscale by 4 times, and therefore avoid grayscale loss caused by brightness reduction and make images finer.
Supporting low-latency output	The lowest latency is one frame.

2.2 Improvement in Maintainability

Characteristics	Description
Supporting the smart module	<p>The smart module is composed of Flash and MCU. Flash could store calibration coefficients and lamp panel information. MCU could communicate with the receiving card to realize monitoring over temperature, voltage and wiring communication status, as well as LED error detection.</p> <p>The smart module could make monitoring unit smaller, requiring no independent monitoring card and saving cabinet space.</p>
Supporting module auto calibration	After the lamp panel has been replaced, the receiving card can automatically read the new lamp panel ID and calibration coefficient which could be saved to calibration system files.
Supporting Mapping function	Enable the Mapping function on NovaLCT, then the target cabinet will display the cabinet number and Ethernet port information, and the user could get the

Characteristics	Description
	receiving card's location and wiring route.
Supporting stored image setting of the receiving card	On NovaLCT, the specified images could be set as the startup image and images used when there is no network or video source.
Supporting lamp panel Flash management	On NovaLCT, lamp panel Flash could be enabled.
Supporting monitoring over temperature, voltage and wiring status	On NovaLCT, temperature, voltage and wiring status of the receiving card could be checked.
Supporting LCD module	Support NovaStar's product 5pin LCD module which is connected to HUB to display temperature, voltage, single operating time and total operating time of the receiving card.
Support one-click module Flash calibration coefficient	In the event of network outage, hold down the self-test button to read the module Flash calibration coefficient back to the receiving card.

2.3 Improvement in Hardware Reliability

Characteristics	Description
Supporting dual-card backup	In the high-reliability environment, single HUB board could be populated with two TR100 receiving cards. In case that the main receiving card fails, the standby one will serve in a timely manner to ensure normal operation of the display.
Supporting dual-power backup & detection	Two power supplies could be simultaneously connected, and operating status of the power supplies could be detected.
Supporting hot backup	Hot backup is used to improve business and connection reliability: Device redundant backup: The device connected to the receiving card improves business reliability through main and standby redundant mechanism. Only the main device is running at a certain time. The standby device begins to work to ensure the normal operation of the display while the main device fails.

2.4 Improvement in Software Reliability

Characteristics	Description
Supporting firmware read back	Information saved in the receiving card could be read back on the NovaLCT.
Supporting dual-backup and restoring of the calibration coefficient	Calibration coefficients could be saved to both the factory area and application area at the same time. Calibration coefficients in the factory area is default as the delivery value, while the calibration coefficient in the application area could be modified or be restored to the factory reset by the user on NovaLCT.
Supporting configuration parameter backup for the receiving card	The user could back up configuration parameters on NovaLCT.

3 Output interface definition

3.1 32-group parallel RGB data

		GND	119	120	GND		

Note 1. Voltage ranging from 3.8V to 5.5V is recommended for input power (VCC).

Note 2. RGB data groups must be used in group.

Note 3. Operating indicator that meets low level is valid.

Note 4. OE_RED, OE_GREEN and OE_BLUE are display enabled pins. In case that OE_RGB are not controlled separately, OE_RED signal is applied. When PWM chip is used, GCLK signal is enabled.

Note 5. RFU1 – 18 are the reserved extended function interfaces. Please refer to “3.2 Reference Design for Expandable Interfaces”.

3.2 Reference Design for Expandable Interfaces

Expandable Interfaces

RFU18	/	/	/

Description:

RFU8 and RFU10 are signal multiplexing expandable interfaces for which the interfaces of either **Recommended Smart Module Interface** or **Recommended Module Flash Interface** can be enabled in one operation.

4 Interface

Product images provided in this file are for reference only, and the actual products (installed with cooling fins) shall prevail.

Models of the high-density receptacle and plug used by TR100 are shown in table Figure 4-1.

Figure 4-1 Model of high-density connector

Type	Brand	Material Code
Receptacle	Amphenol FCI	10140609-121802LF
PLUG	Amphenol FCI	10140607-121802LF

5 Dimensions

(Unit: mm)

6 Specifications

Input voltage	3.8V~5.5V
Rated voltage	5.0V
Rated current	1.0A
Rated power consumption	5.0W
Operating ambient temperature	-20°C~70°C
Operating ambient Humidity	0%RH~95%RH,non-condensing.
Dimension(L x W)	85.5mm×45.0mm×17.4mm
Net weight	67.5g
Certifications	EMC RoHS
Packing	The antistatic bag and anti-collision foam are prepared for each receiving card. Dimension of the packing box: 378mm×190mm×120mm, each of 30 receiving cards.
