| V1.0.0           | 2021-05-19   | First release  |

## Introduction

The MRV416 is a general receiving card developed by Xi'an NovaStar Tech Co., Ltd. (hereinafter referred to as NovaStar). A single MRV416 supports resolutions up to 512x384@60Hz (NovaLCT V5.3.0 or later required). Supporting various functions such as the brightness calibration, quick adjustment of dark or bright lines, 3D, and individual Gamma adjustment for RGB, the MRV416 can greatly improve the display effect and user experience.

The MRV416 uses 16 standard HUB75E connectors for communication, resulting in high stability. It supports up to 32 groups of parallel RGB data and is suitable for various on-site setups.

## Certifications

RoHS, EMC Class A

**If the product does not have the relevant certifications required by the countries or regions where it is to be sold, please contact NovaStar to confirm or address the problem. Otherwise, the customer shall be responsible for the legal risks caused or NovaStar has the right to claim compensation.**

## Features

### Improvements to Display Effect

- **Brightness calibration**  
Work with the high-precision calibration system to perform brightness calibration on each LED to effectively remove brightness differences, enabling high brightness consistency.
- **Quick adjustment of dark or bright lines**  
The dark or bright lines caused by splicing of modules or cabinets can be adjusted to improve the visual experience. The adjustment can be easily made and takes effect immediately.
- **3D function**  
Working with the sending card that supports 3D function, the receiving card supports 3D output.
- **Individual Gamma adjustment for RGB**  
Working with NovaLCT (V5.2.0 or later) and the sending card that supports this function, the receiving card supports individual adjustment of red Gamma, green Gamma and blue Gamma, which can effectively control image non-uniformity under low grayscale and white balance offset, allowing for a more realistic image.

## Improvements to Maintainability

- Quick uploading of calibration coefficients  
Upload the calibration coefficients quickly to the receiving cards to improve efficiency.
- Mapping function  
The cabinets can display the receiving card number and Ethernet port information, allowing users to easily obtain the locations and connection topology of receiving cards.
- Setting of a pre-stored image in receiving card  
The image displayed on the screen during startup, or displayed when the Ethernet cable is disconnected or there is no video signal can be customized.
- Temperature and voltage monitoring  
The receiving card temperature and voltage can be monitored without using peripherals.
- Cabinet LCD  
The LCD module of the cabinet can display the temperature, voltage, single run time and total run time of the receiving card.
- Bite error detection  
The Ethernet port communication quality of the receiving card can be monitored and the number of erroneous packets can be recorded to help troubleshoot network communication problems.  
NovaLCT V5.2.0 or later is required.
- Firmware program readback  
The receiving card firmware program can be read back and saved to the local computer.  
NovaLCT V5.2.0 or later is required.
- Configuration parameter readback  
The receiving card configuration parameters can be read back and saved to the local computer.

## Improvements to Reliability

- Loop backup  
The receiving card and sending card form a loop via the main and backup line connections. If a fault occurs at a location of the lines, the screen can still display the image normally.
- Dual backup of configuration parameters  
The receiving card configuration parameters are stored in the application area and factory area of the receiving card at the same time. Users usually use the configuration parameters in the application area. If necessary, users can restore the configuration parameters in the factory area to the application area.
- Dual program backup  
Two copies of firmware program are stored in the application area of the receiving card at the factory to avoid the problem that the receiving card may get stuck abnormally during program update.

## Appearance

All product pictures shown in this document are for illustration purpose only. Actual product may vary.

| Name                   | Description  |
|------------------------|--|
| HUB75E Connectors      | Connect to the module.   |
| Power Connector        | Connect to the input power. Either of the connectors can be chosen.  |
| Gigabit Ethernet Ports | Connect to the sending card, and cascade other receiving cards. Each connector can be used as input or output.   |
| Self-Test Button       | Set the test pattern.<br>After the Ethernet cable is disconnected, press the button twice, and the test pattern will be displayed on the screen. Press the button again to switch the pattern. |
| 5-Pin LCD Connector    | Connect to the LCD.  |

## Indicators

| Indicator         | Color | Status                      | Description   |
|-------------------|-------|-----------------------------|---|
| Running indicator | Green | Flashing once every 1s      | The receiving card is functioning normally. Ethernet cable connection is normal, and video source input is available. |
|                   |       | Flashing once every 3s      | Ethernet cable connection is abnormal.  |
|                   |       | Flashing 3 times every 0.5s | Ethernet cable connection is normal, but no video source input is available.  |
|                   |       | Flashing once every 0.2s    | The receiving card failed to load the program in the application area and is now using the backup program.            |
|                   |       | Flashing 8 times every 0.5s | A redundancy switchover occurred on the Ethernet port and the loop backup has taken effect.                           |
| Power indicator   | Red   | Always on                   | The power input is normal.  |

## Dimensions

The board thickness is not greater than 2.0 mm, and the total thickness (board thickness + thickness of components on the top and bottom sides) is not greater than 19.0 mm. Ground connection (GND) is enabled for mounting holes.

Tolerance:  $\pm 0.3$  Unit: mm

To make molds or trepan mounting holes, please contact NovaStar for a higher-precision structural drawing.
